ID Marker, U100, Black (100/Pack)

Series 100 Address ID markers are utilized in aerial installations and in pedestals. The raised numerals and durable material provide the utmost in longevity. The most often employed installation technique is to identify the last two digits of the house number or apartment to be serviced by the drop cable.

The numerals 0 through 9 on the black markers are molded into the marker itself, and overlaid in white for long lasting identification. These markers are also available with letters A through Z, and abbreviations 1/2, UP, DN, BK, FT and AP. 100 per pack.
