

REV Series

In-ceiling home theater, LCR

REV Series

All professional installers will occasionally have issues with window and door placement, room layout, or even a fireplace that could impede a proper home theater install. The REV Series easily solves those issues by allowing you to put quality sound in the ceiling. An angled housing that rotates and an adjustable mid-range tweeter bridge provides directionality of sound to the listening area. Following its debut, the REV Series was awarded several design awards, including "Product of the Year" by Electronic House for innovation and value.
